

WHAT IS CLAIMED IS:

1. A synthetic intermediate of general formula (I)

wherein R¹ represents a protective group for the amino group, R² and R³ are the same or different and each represents a lower alkyl group; a salt or an amide derivative thereof.

2. A synthetic intermediate of general formula (II)

wherein R¹ represents a protective group for the amino group, R² and R³ are the same or different and each represents a lower alkyl group, R⁴ represents a hydrogen atom or a protective group for the carboxyl group; a salt or an amide derivative thereof.

3. A process for the preparation of a synthetic intermediate of general formula (I)

wherein R¹ represents a protective group for the amino group, R² and R³ are the same or different and each represents a lower alkyl group; or a salt thereof, which process comprises the reaction of a compound of general formula (IV)

wherein R¹, R² and R³ have the same meanings as given above; with a compound of general formula (V)

or a salt thereof.

4. A process for the preparation of a synthetic intermediate of general formula (VI')

wherein R¹ represents a protective group for the amino group, R² and R³ are the same or different and each represents a lower alkyl group; or a salt thereof, which process comprises the reduction of the hydroxyl group of a compound of general formula (I)

wherein R¹, R² and R³ have the same meanings as given above; or a salt thereof by phosphorous acid and an alkali metal iodide.

5. A process for preparation according to claim 4 wherein the reduction is carried out in an organic acid.

6. A process for the preparation of a synthetic intermediate of general formula (II)

wherein R¹ represents a protective group for the amino group, R² and R³ are the same or different and each represents a lower alkyl group, R⁴ represents a hydrogen atom or a protective group for the carboxyl group; or a salt thereof, which process comprises the nitration of a compound of general formula (VI)

wherein R¹, R², R³ and R⁴ have the same meanings as given above; or a salt thereof.

7. A process for the preparation of a synthetic intermediate of general formula (VII)

wherein R¹ represents a protective group for the amino group, R² and R³ are the same or different and each represents a lower alkyl group, R⁴ represents a hydrogen atom or a protective group for the carboxyl group; or a salt thereof, which process comprises the reduction of a compound of general formula (II)

wherein R¹, R², R³ and R⁴ have the same meanings as given above; or a salt thereof.

8. A process for the preparation of a synthetic intermediate of general formula (VIII)

wherein R¹ represents a protective group for the amino group, R² and R³ are the same or different and each represents a lower alkyl group, R⁴ represents a hydrogen atom or a protective group for the carboxyl group; or a salt thereof, which process comprises the pivaloylation of a compound of general formula (VII)

wherein R¹, R², R³ and R⁴ have the same meanings as given above; or a salt thereof.

9. A process for the preparation of a synthetic intermediate of general formula (III)

wherein R² and R³ are the same or different and each represents a lower alkyl group, R⁴ represents a hydrogen atom or a protective group for the carboxyl group, nOc represents an octyl group; or a salt thereof, which process comprises the octylation of a compound of general formula (IX)

wherein R², R³ and R⁴ have the same meanings as given above; or a salt thereof.

10. A process for preparation according to claim 9 wherein said process is carried out using xylene as a solvent.

11. A process for preparation according to claim 9 wherein said process is carried out using butyl acetate as a solvent.

12. A process for preparation according to any one of claims from 8 to 11 wherein said process is carried out using diisopropylethylamine as a base.
